80 % Volume  
Reduction

# The Extra High Collapsible Box with Maximum Volume Reduction

The Clever-Retail-Box shows just how efficient logistics can be. With a height of 400 mm, the container offers even more space for stowing content and, at the same time, it is a true space saving miracle. After use, the Clever-Retail-Box can be collapse manually or fully automatically. The volume of the box is therefore reduced by 80% and the empty boxes can be stored in a way that saves space and money, and then be transported back.

In order to protect the goods, the container has a two-part hinged lid. When the container is open, the lid flaps fit closely together and save space. The lid flaps are interlocked in order to prevent anyone being able to reach into the box.

Suitable for the individual requirements in the field of storage technology, the folding container is available with a smooth bottom or a running-tread base.

## Plus Points at a Glance!

- + 80 % volume reduction
- + outer dimensions 600 x 400 x 400 mm
- + height when folded in stack 75 mm
- + easy handling thanks to a patented ergonomic lift lock closure
- + for manual and fully automatic handling
